DEPARTMENT OF THE ENVIRONMENT

INTRODUCTION TO THE NON-DOMESTIC SUBSTANCES LIST

Purpose

The *Canadian Environmental Protection Act* (CEPA) was proclaimed on June 30, 1988. Subsection 25(2) of the Act requires the Minister of Environment to "compile a list, to be known as the *Non-domestic Substances List*, and the list shall specify substances other than the substances referred to in" the Domestic Substances List (DSL).

The Domestic Substances List, required under subsection 25(1) of the CEPA, specifies "all substances that the Minister is satisfied were, between January 1, 1984 and December 31, 1986, (a) manufactured in or imported into Canada by any person in a quantity of not less than 100 kg in any one calendar year; or (b) in Canadian commerce or used for commercial manufacturing purposes in Canada". The DSL identifies substances which, for the purposes of the CEPA, are not subject to the requirements of the *Regulations Respecting Notification of Substances New to Canada* (New Substances Notification Regulations) implemented under section 32 of the CEPA. The DSL defines existing substances for the purposes of the Act and is the sole basis for determining whether a substance is "existing" or "new" to Canada.

The Non-domestic Substances List (NDSL) specifies substances, other than those on the DSL, that are in world commerce but not in Canada. The NDSL is based on the United States Environmental Protection Agency's (EPA) 1985 inventory of commercial substances compiled for the *Toxic Substances Control Act* (TSCA). The TSCA inventory, therefore, serves as a surrogate for substances in world commerce during the 1984-1986 period specified for the compilation of the DSL. Substances that are not on the DSL will require notification and assessment before they can be manufactured in or imported into Canada. The notification information required from importers and manufacturers is prescribed in the *New Substances Notification Regulations* and includes physical, chemical and toxicological data on the substances. Substances on the NDSL, however, have less onerous notification requirements than other new substances.

The NDSL is not static and is subject, from time to time, to additions and deletions, which will be published in the *Canada Gazette* as amendments of the List. This publication and all such amendments constitute the *Non-domestic Substances List* for the purposes of the *New Substances Notification Regulations* of the CEPA.

Compilation of the Non-domestic Substances List

The NDSL is based on the 1985 published TSCA Inventory minus the following:

- (1) all substances specified on the DSL;
- (2) all substances identified as "no longer in inventory" in the 1990 *Supplement to the 1985 Edition of the TSCA Inventory* published in June 1990 (EPA560/7-90-003) by the US EPA;

MINISTÈRE DE L'ENVIRONNEMENT

INTRODUCTION À LA LISTE EXTÉRIEURE DES SUBSTANCES

Objectif

La *Loi canadienne sur la protection de l'environnement* (LCPE) a été adoptée le 30 juin 1988. Le paragraphe 25(2) de la Loi exige que le ministre de l'Environnement établisse une «liste de substances, dénommée *Liste extérieure des substances*, où figurent des substances autres que celles» qui figurent sur la Liste intérieure des substances (LIS).

En vertu du paragraphe 25(1) de la LCPE, la Liste intérieure des substances énumère «toutes les substances que le ministre estime avoir été, entre le 1^{er} janvier 1984 et le 31 décembre 1986, a) soit fabriquées ou importées au Canada par une personne en des quantités d'au moins 100 kg au cours d'une année; ou b) soit commercialisées ou utilisées à des fins de fabrication commerciale au Canada». La LIS énumère des substances qui, aux fins de la LCPE, ne seront pas assujetties aux exigences du *Règlement concernant la fourniture de renseignements sur les substances nouvelles au Canada* (*Règlement sur les renseignements concernant les substances nouvelles*), en vertu de l'article 32 de la LCPE. La LIS définit ce qu'est une substance existante au sens de la Loi et est le seul document qui permet de déterminer si une substance est «existante» ou «nouvelle» au Canada.

La Liste extérieure des substances (LES) renferme le nom des substances qui ne figurent pas sur la LIS et qui sont commercialisées ailleurs qu'au Canada. La LES est fondée sur l'inventaire de 1985 de la United States Environmental Protection Agency (EPA), établi pour les besoins du *Toxic Substances Control Act* (TSCA). L'inventaire du TSCA sert donc ici de substitut pour représenter les substances retrouvées sur le marché international entre 1984 et 1986, soit la période spécifiée pour l'établissement de la LIS. Les substances non énumérées sur la LIS devront faire l'objet d'un préavis et d'une évaluation avant leur fabrication ou leur importation au Canada. La documentation requise par les importateurs et les fabricants sera indiquée dans le *Règlement sur les renseignements concernant les substances nouvelles* et inclura des données physiques, chimiques et toxicologiques sur la substance. Les substances énumérées sur la LES seront soumises à des exigences de préavis moins nombreuses.

La LES n'est pas statique. De temps à autre, elle sera sujette à des additions ou de suppressions qui seront publiées dans la *Gazette du Canada*, en tant que modifications à la Liste. Cette publication et tous les amendements constitueront la *Liste extérieure des substances* au sens du *Règlement sur les renseignements concernant les substances nouvelles* de la LCPE.

Établissement de la Liste extérieure des substances

La LES est fondée sur l'inventaire publié en 1985 du TSCA, duquel on a soustrait les substances suivantes :

- (1) toutes les substances énumérées sur la LIS;
- (2) toutes les substances identifiées comme étant «no longer in inventory» dans le 1990 *Supplement to the 1985 Edition of the TSCA Inventory* publié en juin 1990 (EPA560/7-90-003) par la US EPA;

Appendix B of the 1985 TSCA Inventory includes approximately 4,500 confidential entries. These substances are identified by disguised or masked names which do not reveal the complete chemical identity. As the Department of the Environment had no access to the true identity of such substances, a reporting period (August 1 to September 15, 1990) was established for nomination to a confidential component of the NDSL. Nominators were required to provide the complete chemical identity and documentation establishing the substance's inclusion in the confidential section of the published 1985 TSCA Inventory. The 679 substances reporting during this period and judged to be acceptable by the Department of the Environment constitute the confidential portion (Appendix A) of the NDSL.

Format and Use of the Non-domestic Substances List

CAS Registry Number. The NDSL consists of a sequential list of substances in ascending order of their Chemical Abstracts Service (CAS) Registry Numbers. A CAS Registry Number consists of up to nine digits which are separated into three groups by hyphens. The first group, starting from the left, has up to six digits; the second group has two digits; and the final group consists of a single check digit. Each CAS Registry Number designates only one chemical substance in terms of atoms, valence bonds and stereochemistry, insofar as that substance has been elucidated and defined. The fact that a substance has been assigned a CAS Registry Number does not define the substance as being on the NDSL. The CAS Chemical Registry System has identified and given unique CAS Registry Numbers to over nine million chemical substances. The NDSL includes approximately 41,000 of these CAS Registry Numbers. CAS Registry Numbers are very specific and care must be exercised in using the NDSL to ensure that a particular CAS Registry Number exactly identifies the substance sought on the List.

Substance Name. In English, each substance on the NDSL is described in accordance with CAS nomenclature. The resulting Chemical Abstracts (CA) Index Name derived following this rigorous and comprehensive set of naming conventions ensures a single, unique name for each substance. CA Index Names are also used in the United States Environmental Protection Agency's *Toxic Substances Control Act Chemical Substances Inventory*, Volume I (1985 edition), and their use for the NDSL ensures substances are identified in a similar manner in both jurisdictions.

In French, each substance on the NDSL is described according to the 1990 organic chemistry nomenclature conventions of the International Union of Pure and Applied Chemistry (IUPAC). IUPAC nomenclature is the basis of the *European Inventory of Existing Commercial Chemical Substances* (EINECS) published by the Commission of the European Communities. This listing is the mechanism used by the member countries, including France, to identify existing chemical substances for purposes of new substances control programs. The use of IUPAC names allows comparisons to be

(3) toutes les substances qui, selon la définition proposée dans le *Règlement sur les renseignements concernant les substances nouvelles*, seront considérées comme un produit des biotechnologies.

L'Annexe B de l'inventaire de 1985 du TSCA inclut approximativement 4 500 substances confidentielles. Ces substances sont identifiées par des dénominations maquillées qui ne révèlent pas l'identité chimique complète. Comme le ministère de l'Environnement n'avait pas accès à la véritable identité chimique de ces substances, une période de déclaration (1^{er} août au 15 septembre 1990) fut établie pour permettre aux déclarants de présenter leurs substances pour une section confidentielle de la LES. Les déclarants ont été appelés à soumettre l'identité ainsi que la documentation nécessaire afin de justifier la présence de ces substances dans la section confidentielle de l'inventaire de 1985 du TSCA. Lors de cette période, les 679 substances qui ont été considérées comme acceptables par le ministère de l'Environnement constituent la section confidentielle (Annexe A) de la LES.

Format et utilisation de la Liste extérieure des substances

Numéro de registre de CAS. La LES est une liste séquentielle de substances en ordre croissant de numéros de registre du *Chemical Abstracts Service* (CAS). Le numéro de registre de CAS est composé d'une série de neuf chiffres au maximum qui sont séparés en trois groupes distincts par des traits d'union. À partir de la gauche, le premier groupe peut contenir six chiffres au maximum, le deuxième en contient deux et le troisième, un seul chiffre servant à fins de vérification. Chaque numéro de registre de CAS désigne une seule et unique substance chimique en termes d'atomes, de liaisons de valence et de stéréochimie, telle que définie et spécifiée jusqu'à maintenant. L'existence d'un numéro de registre de CAS pour une substance n'engage en rien l'apparition de cette substance sur la LES. Plus de neuf millions de substances ont été identifiées et ont reçu des numéros de registre de CAS uniques du *CAS Chemical Registry System*. La LES ne contient qu'approximativement 41 000 de ces numéros de registre de CAS. Les numéros de registre de CAS sont très spécifiques et on doit s'assurer que la substance recherchée est bel et bien celle répertoriée sur la LES.

Nom de substance. Sur la LES, le nom anglais de la substance est décrit selon les règles de nomenclature de CAS. Le nom de l'index du *Chemical Abstracts* (index CA), qui résulte de l'application de l'ensemble de ces conventions rigoureuses, assure un nom unique et particulier à chaque substance. Les noms de l'index CA sont utilisés dans le *Toxic Substances Control Act Chemical Substances Inventory*, Volume 1 (édition 1985) de la United States Environmental Protection Agency. L'utilisation des noms de l'index CA sur la LES assure une même façon d'identifier les substances dans les deux juridictions.

En français, les substances de la LES sont décrites selon les règles de nomenclature des composés organiques de l'Union internationale de chimie pure et appliquée (UICPA) en vigueur en 1990. L'*Inventaire européen des produits chimiques commercialisés* (EINECS) publié par la Commission des communautés européennes utilise la nomenclature UICPA. Cet inventaire est la liste de base utilisée par la France et par tous les pays membres afin d'identifier les substances chimiques existantes aux fins des programmes de contrôle des nouvelles substances. La nomenclature UICPA permet un

made between the French versions of the NDSL and the EINECS.

It is important to note that only a single English and French name is provided for each substance on the NDSL. Synonyms and trade names have not been included. A substance may be marketed under a variety of names. The absence of a particular descriptive name from the NDSL does not mean that the substance is not included on the List. It may be that the name being used in a search is not the proper CA Index (English) or IUPAC (French) name.

Molecular Formula. The molecular formula is included when the structure of the substance is well defined. The element symbols in the molecular formula are arranged according to the Hill system; carbon-containing compounds have "C" first, followed immediately by "H" if present, then the remaining symbols alphabetically. For compounds not containing carbon, the order of symbols is strictly alphabetical.

UVCB Substances. Certain CAS Registry Numbers which appear on the NDSL are followed by an asterisk (*). The asterisk is used to identify substances of unknown or variable composition, complex reaction products, and biological material; commonly referred to as UVCB substances. Substances designated by an asterisk have been assigned Registry Numbers by CAS to support the needs of government regulatory agencies and are not used by CAS Abstracting and Indexing Services. For some UVCB substances, a CA Index Name may not be sufficiently descriptive and a definition is required. A definition typically begins with a description of the process by which the substance is manufactured and ends with a specific or generic listing of the predominant chemical species of the composition. A definition may also contain characteristic physical data, such as boiling point range. Substance definitions follow the CA Index Name (English) and IUPAC Name (French).

Confidential Substances. Substances nominated for the confidential portion of the NDSL and judged to be eligible for inclusion by the Department of the Environment are included in Appendix A, *Masked Names for Confidential Substance Identities*, of the NDSL. While the masked names are similar to names used in the non-confidential portion of the List, the portion(s) of each name which, if specified, would directly or indirectly reveal the "confidential" nature of the substance, has been masked by the use of a generic term. Examples of such terms are: alkyl, heteropolycycle, substituted and derivative. Substances included in Appendix A are listed in ascending order of assigned Confidential Substance Identity Numbers. Each Confidential Substance Identity Number consists of a five digit series separated by a hyphen from a single check digit. These numbers are generated by the Department of the Environment, not CAS, and are not included in the CAS Chemical Registry System. While the names in Appendix A are generally in accordance with either CA or IUPAC nomenclature, the different potential approaches to derivation of a masked name mean it has not been possible to strictly adhere to these conventions in every case.

rapprochement entre la version française de la LES et l'EINECS.

Il est à noter qu'un seul nom français et un seul nom anglais sont associés à chaque substance figurant sur la LES. Les synonymes et les noms commerciaux n'y sont pas inclus. Une substance peut se retrouver commercialisée sous une panoplie de noms. L'absence d'un nom particulier sur la LES ne signifie pas que la substance n'apparaît pas sur la Liste. Il est possible que le nom recherché ne soit pas conforme aux règles de l'index CA (version anglaise) ou de l'UICPA (version française).

Formule moléculaire. Lorsque la structure de la substance est définie, la formule moléculaire est donnée. Les symboles des éléments de la formule moléculaire sont ordonnés selon les règles du système Hill. Pour les composés contenant du carbone, le «C» figure en premier, suivi de «H», s'il y en a, puis des autres éléments en ordre alphabétique. Pour les composés ne contenant pas de carbone, l'ordre est strictement alphabétique.

Substances UVCB. Certains numéros de registre de CAS, qui apparaissent sur la LES, sont suivis d'un astérisque (*). Cet astérisque est utilisé pour identifier les substances de composition inconnue ou variable, les produits de réaction complexe ou les matières biologiques (UVCB—unknown or variable composition, complex reaction products, and biological materials). Des numéros de registre de CAS ont été attribués aux substances désignées par un astérisque afin de répondre aux besoins des organismes régulateurs gouvernementaux, mais ces numéros ne sont pas utilisés par les services de rédaction et d'indexation de CAS. Pour quelques substances UVCB, le nom de l'index CA n'est pas suffisamment descriptif et requiert une définition. Une définition débute habituellement par une description du processus utilisé pour fabriquer la substance et se termine par une liste spécifique ou générique de l'espèce chimique prédominante de la composition. La définition peut aussi contenir des données physiques, telle une plage d'ébullition caractéristique à la substance. Les définitions sont données sur la LES et suivent le nom de l'index CA (version anglaise) ou le nom UICPA (version française).

Substances confidentielles. Les substances déclarées pour la section confidentielle de la LES et jugées admissibles au traitement confidentiel par le ministère de l'Environnement apparaissent à l'annexe A de la LES, *Dénominations maquillées des Identités chimiques confidentielles*. Même si les dénominations maquillées sont du même type que les noms chimiques qui apparaissent à la section non confidentielle de la Liste, les caractéristiques structurales d'une substance qui, si spécifiées, en révéleraient l'identité, ont été remplacées par un nom plus générique tel qu'alkyle, hétéropolycycle, substitué et dérivé. Les substances qui apparaissent à l'annexe A sont présentées en ordre croissant de numéro d'identité chimique confidentielle. Ce nombre est composé d'une série de cinq chiffres séparée par un trait d'union et suivie d'un chiffre servant à des fins de vérification. Les numéros sont attribués par le ministère de l'Environnement et non par le CAS et ne sont donc pas intégrés dans le CAS Chemical Registry System. Quoique la majorité des noms énumérés à l'annexe A suivent soit les règles CA ou celles de l'UICPA, les différentes approches de maquillage des dénominations rendent difficile une conformité rigoureuse à ces conventions.

Substance Categories of Special Note

Polymers. Polymers, with the exception of polyglycols, siloxanes and silicones, and vinylacetal polymers, are represented on the NDSL in terms of the starting materials from which they are manufactured. In addition to the monomers, this includes other reactants such as catalysts, free radical initiators, cross-linking and chain transfer agents that are intended to become chemically incorporated into the polymer structure. The description of the polymer includes those monomers and other reactants constituting greater than two percent by mass of the polymer. Other additives such as plasticizers, colorants and ultra-violet absorbers which do not become chemically part of the polymeric structure, are not included in the polymer name. If a prepolymer is used in the manufacture of the polymer, it is listed in the description of the polymer in terms of the monomers used in its manufacture.

Products of Biotechnology. At the time of this publication (January 1991), Department of the Environment's consultations were underway with interested parties on regulations proposed for products of biotechnology for implementation under the CEPA. Consequently, products of biotechnology have been excluded from this listing. The regulatory controls implemented following the conclusion of these consultations may require the reinstatement of some or all of these substances to the NDSL. Should this be necessary, additions to the NDSL will be announced in the *Canada Gazette*.

Colour Index Substances. The NDSL includes some CAS Registry Numbers for which the CA Index Name is the Colour Index Name as specified in the *Colour Index* (Third Edition). A literal translation of such names into French could be confusing for users and, for that reason, the nomenclature approach used in EINECS has been adopted. In essence, a name which chemically describes the substance and which has been identified by CAS as an acceptable synonym for the CAS Registry Number, has been translated into French. There are a few instances where such a chemical description is unavailable and a literal translation of the Colour Index Name has been the only option.

Availability of the NDSL in Other Formats

To further assist individuals wishing to utilize the NDSL, the Department of the Environment has arranged for its inclusion on the CD-ROM CCINFODisc prepared and distributed by the Canadian Centre for Occupational Health and Safety (CCOHS). Individuals requiring information on CCINFODisc and its availability should contact: CCINFO Services, Canadian Centre for Occupational Health and Safety, 250 Main Street East, Hamilton, Ontario L8N 1H6, or call toll free: 1-800-263-8340.

The Department of the Environment is also making the NDSL available in a computer readable version. The format is standard 5¼ in diskette (MS-DOS operating system, ASCII file) containing all CAS Registry Numbers on the DSL and NDSL. Substance names are not included. The diskettes are available, on request, by contacting the Department of the Environment at the address or telephone noted in the next section.

Catégories de substances particulières

Polymères. À l'exception des polyglycols, des siloxanes et silicones, et des polymères d'acétale vinylique, les polymères sont représentés sur la LES en termes de leurs produits de base, ceux à partir desquels ils ont été fabriqués. En plus des monomères, cela comporte les autres réactifs tels les catalyseurs, les initiateurs de radicaux libres et les agents de réticulation et de migration de chaîne qui sont destinés à être insérés chimiquement dans la structure polymérique. La description d'un polymère inclut les monomères et tout autre réactif constituant plus de 2 pour 100 de la masse du polymère. Les autres additifs, tels les plastifiants, les colorants et les absorbeurs d'ultra-violet qui ne font pas chimiquement partie de la structure polymérique, ne sont pas incorporés dans le nom du polymère. Si un prépolymère est utilisé, il est inscrit dans la description du polymère en termes des monomères utilisés lors de sa fabrication.

Produits des biotechnologies. Au moment de la publication de ce texte (janvier 1991), des consultations entre le ministère de l'Environnement et les parties intéressées au règlement concernant les produits des biotechnologies, sous la LCPE, sont en préparation. Conséquemment, les produits des biotechnologies ne sont pas inclus dans cette liste. À la suite de ces consultations, la mise en application de ce règlement pourrait nécessiter l'addition de certains types de produits des biotechnologies à la LES. Si cela se révélait nécessaire, les additions à la LES qui en découleront seront publiées dans la *Gazette du Canada*.

Substances du Colour Index. Pour certains numéros de registre de CAS, le nom de l'index CA qui apparaît sur la LES est le nom du *Colour Index* tel que répertorié dans le *Colour Index* (troisième édition). Une traduction directe de l'anglais au français de tels noms pourrait porter à confusion et c'est pour cette raison que la nomenclature en français suit l'approche adoptée par le registre EINECS. Ainsi, le nom français est un nom qui décrit chimiquement la substance et qui a été traduit d'un nom identifié par le CAS comme étant un synonyme acceptable pour le numéro de registre de CAS. Dans certains cas, la description chimique n'étant pas disponible, une traduction directe du nom du *Colour Index* constituait la seule solution.

Autres formats disponibles pour la LES

Afin d'aider les personnes désirant utiliser la LES, le ministère de l'Environnement a procédé à l'intégration de la LES sur le disque CCINFO CD-ROM préparé et distribué par le Centre canadien d'hygiène et de sécurité au travail (CCHST). Les personnes qui désirent avoir plus d'information au sujet du disque CCINFO et de sa disponibilité doivent communiquer avec le Service INFO-Centre, Centre canadien d'hygiène et de sécurité au travail, 250, rue Main est, Hamilton (Ontario) L8N 1H6, ou téléphoner sans frais au 1-800-263-8340.

Le ministère de l'Environnement rendra aussi disponible une version de la LES en format magnétique, qui consiste en une disquette standard de 5¼ po contenant un fichier codé en ASCII et utilisant le système d'opération MS-DOS. Cette disquette contient la liste de tous les numéros de registre de CAS inclus dans la LIS et la LES. Veuillez noter que les noms des substances n'y sont pas inclus. Les disquettes sont disponibles sur demande en communiquant avec le ministère de l'Environnement à l'adresse ou aux numéros de téléphone indiqués dans la section suivante.

Acknowledgements

Several organizations deserve special mention for the assistance provided to the Department of the Environment during the preparation of the NDSL.

The Commission of the European Communities was extremely helpful in advising on the preparation of a multilingual publication and provided the English and French names of substances included in EINECS. The assistance of Dr. G. del Bino, L. Moitinho, D. Perry, N. Schovgaard and T. Smyrniotis was particularly appreciated.

The United States Environmental Protection Agency provided a listing of all EPA Accession numbers included on the published 1985 TSCA Inventory with each number linked to a U.S. EPA Chemical Substance Inventory Report Form C serial number or a Premanufacturing Notification Number. This greatly facilitated the reporting and evaluation processes for confidential substances.

Finally, special thanks are extended to Mr. Roger Couture and his hard working translation team at the Translation Bureau, Secretary of State.

The efforts of Dr. H. Favre in providing expert advice on French chemical nomenclature are gratefully acknowledged.

Information et assistance

Pour plus de renseignements au sujet de la Liste extérieure des substances, on doit communiquer avec le ministère de l'Environnement à l'adresse suivante: Déclaration des nouvelles substances, Direction des produits chimiques commerciaux, Ministère de l'Environnement, Place Vincent-Massey, 14^e étage, 351, boulevard Saint-Joseph, Hull (Québec) K1A 0H3, 1-800-567-1999 (appels sans frais), 819-953-7155 (télécopieur).

Remerciements

Le ministère de l'Environnement se doit de mentionner le nom de plusieurs organismes pour l'aide précieuse qu'ils ont apportée lors de la préparation de la LES.

Les conseils de la commission des Communautés européennes quant à la préparation d'une publication bilingue furent grandement appréciés. La commission a aussi fourni les noms français et anglais des substances apparaissant au registre EINECS. L'aide des personnes suivantes fut aussi particulièrement appréciée: Dr G. del Bino, L. Moitinho, D. Perry, N. Schovgaard et T. Smyrniotis.

La United States Environmental Protection Agency a fourni une liste de tous les numéros matricules de l'inventaire de 1985 du TSCA associés soit à un numéro de formulaire de déclaration C utilisé pour l'inventaire de substances chimiques du EPA, soit à un numéro d'avis précédant la fabrication (Premanufacturing Notification (PMN) Number). Cela a grandement facilité le processus de nomination et d'évaluation des substances confidentielles.

Finalement, nous voudrions remercier M. Roger Couture et son équipe du Bureau de traduction du Secrétariat d'État.

Nous ne voudrions pas omettre de souligner l'aide et l'expertise du Dr H. Favre en matière de nomenclature chimique française.
